

14) VB Program using Validation Control

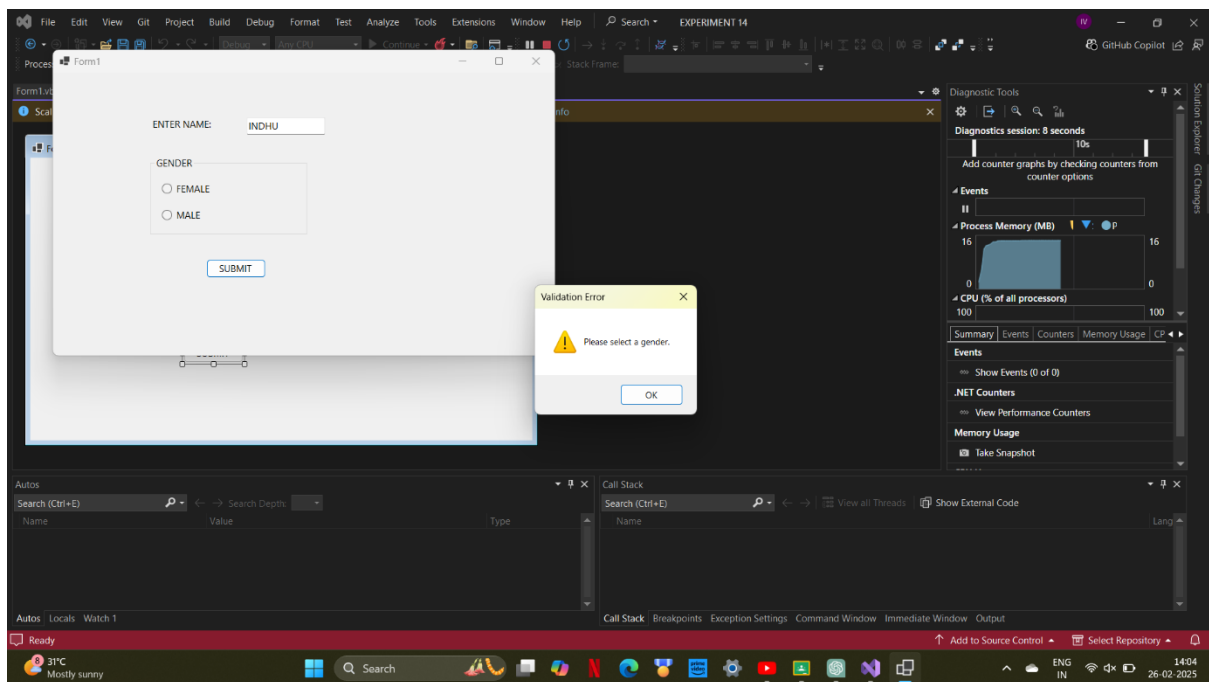

Aim:

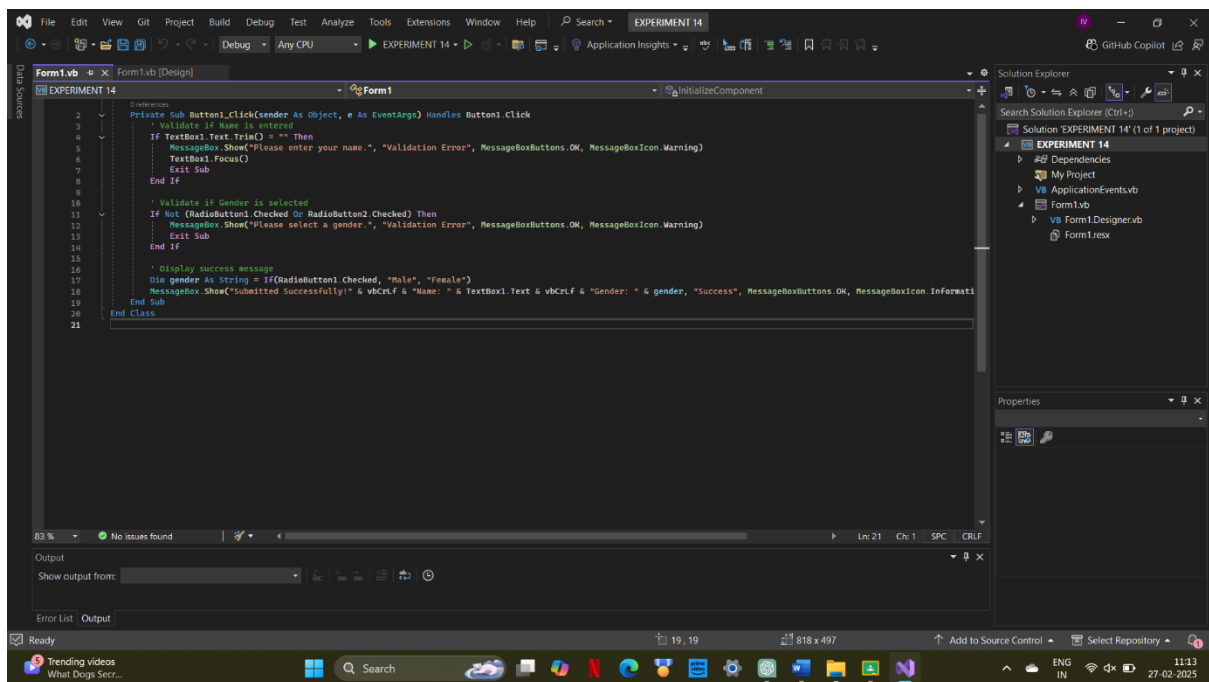

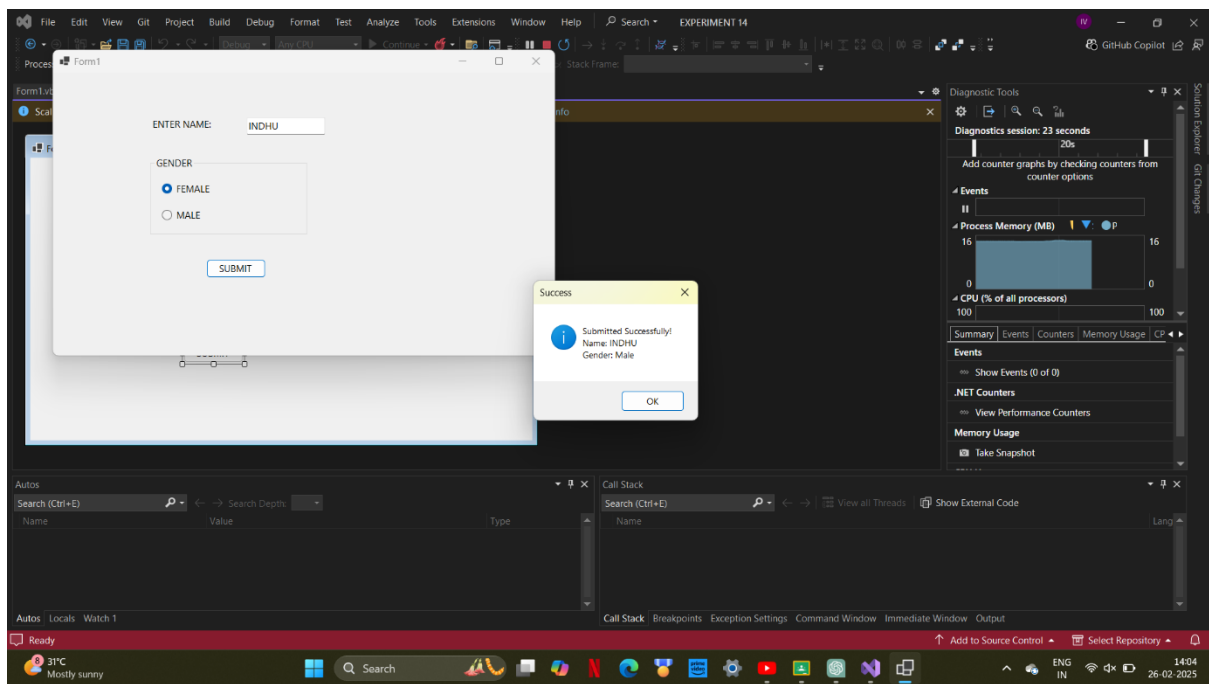

To design a Visual Basic program that validates user input, ensuring only numeric values are entered into a textbox and displaying an error message for invalid inputs.

Procedure:

1. Create a VB project.
2. Add:
 - A **Textbox** (Text1) for numeric input.
 - A **Command Button** (Command1).
3. Write the following code to ensure only numbers are entered:

OUTPUT:

RESULT:

The output displayed successfully with validation message.
