

16) VB program for Web server control

AIM:

To develop a simple ASP.NET web application using Web Server Controls like **Label**, **TextBox**, and **Button** to display user input.

PROCEDURE:

1.Open Visual Studio

- Open **Visual Studio** → Create a new project → Select **ASP.NET Web Application**.
- Choose **Empty** template → Click **OK**.

2.Design the Form

- Open **Default.aspx**.
- Add the following controls:
 - **Label** – To display instructions and results.
 - **TextBox** – To take user input.
 - **Button** – To trigger actions.

3.Write the Code

- Open **Default.aspx.vb**.
- Write the following code to handle user input and display the result:

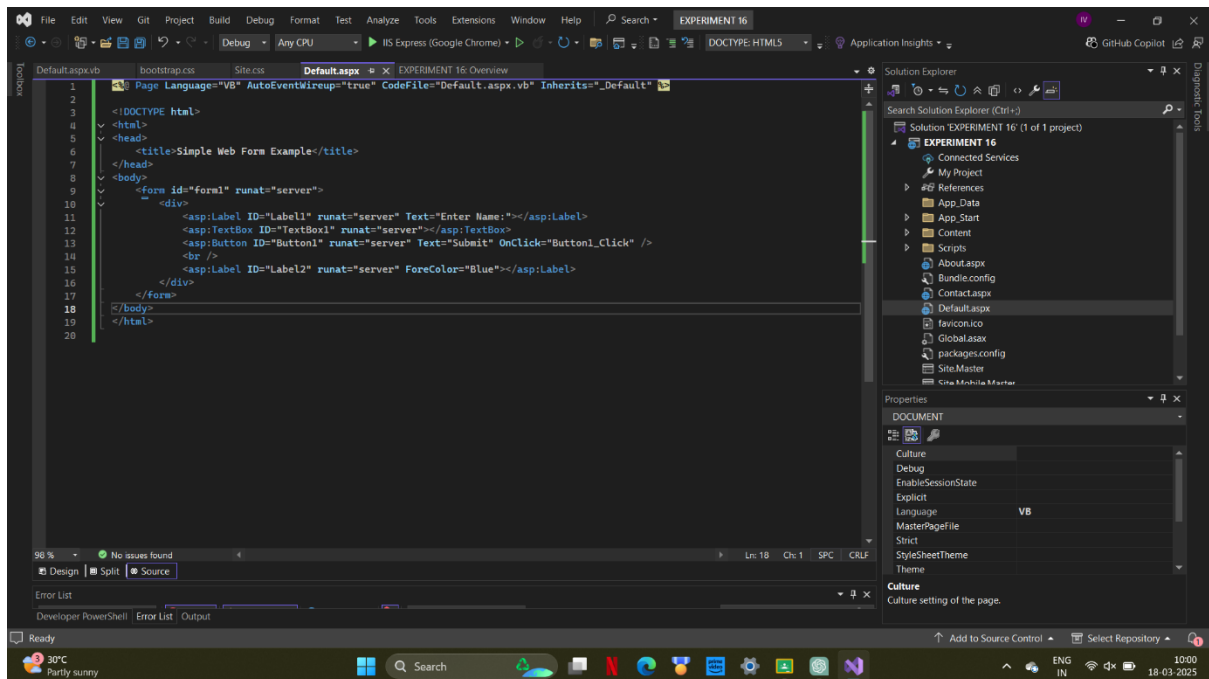

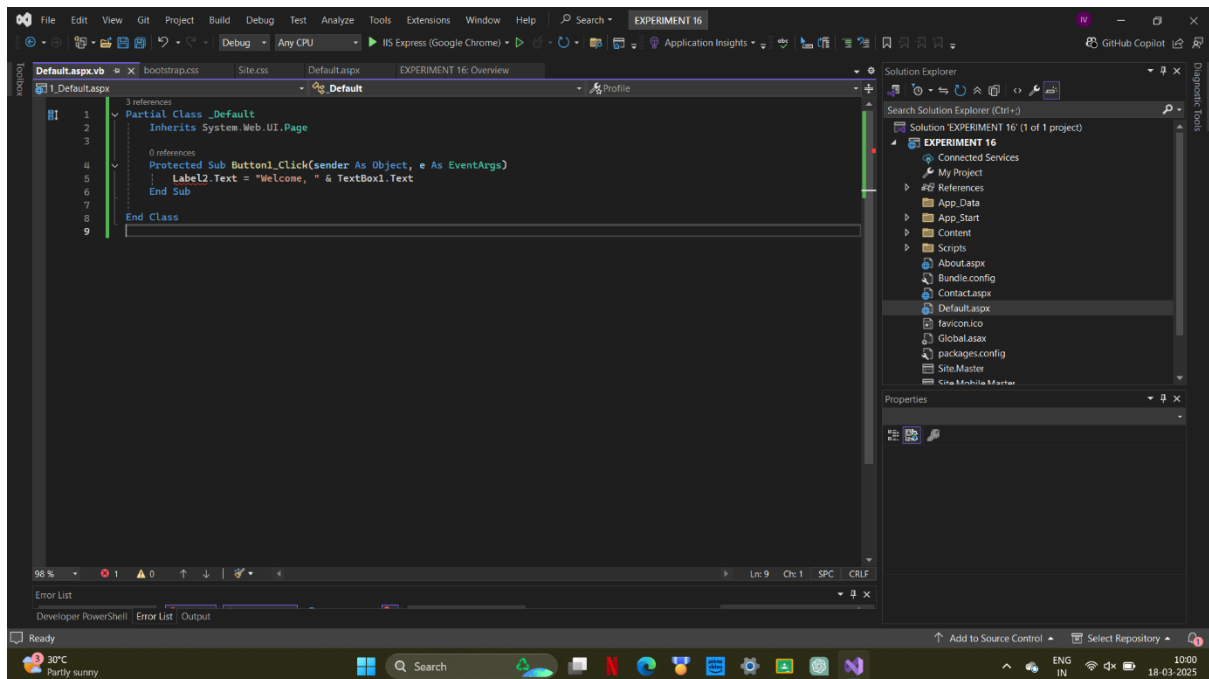

4.Build and Run

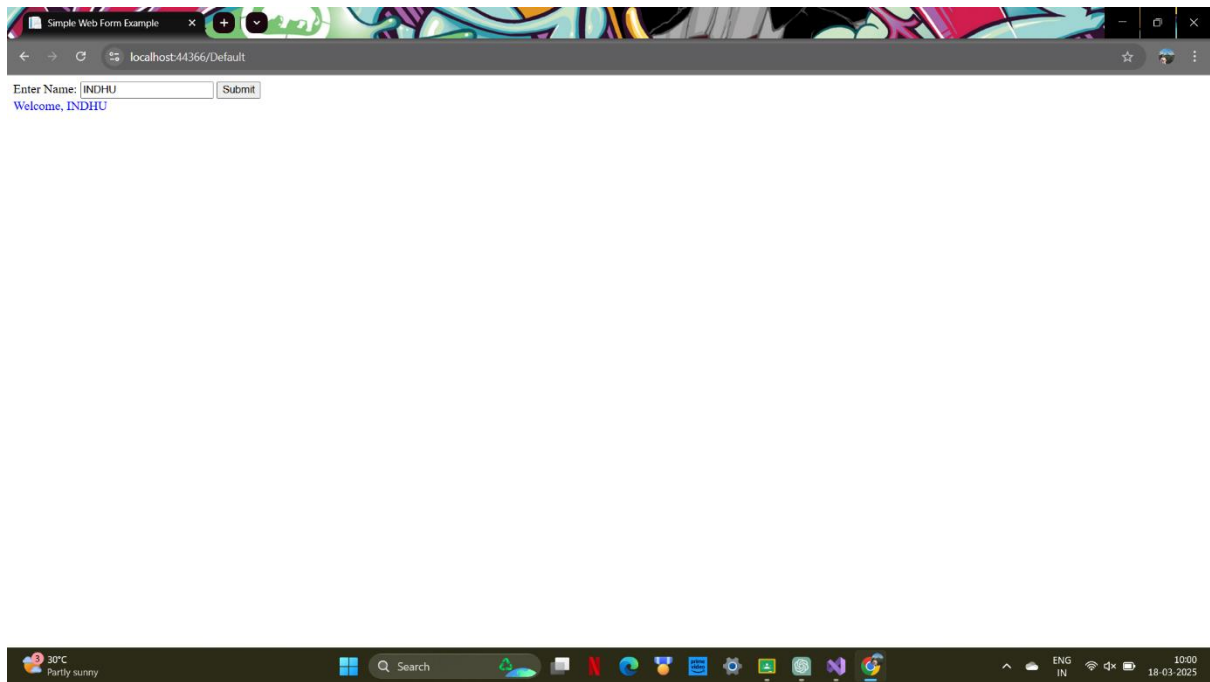

- Save the files.
- Build and run the project.

5.Test the Application

- Enter your name in the text box.
- Click **Submit**.
- The result should display below the button.

OUTPUT:

RESULT:

The ASP.NET web application was successfully developed and executed using **Web Server Controls**. The user input was captured, processed, and displayed successfully.
