

11) VB Program using Textbox, Label, and Command Button Control

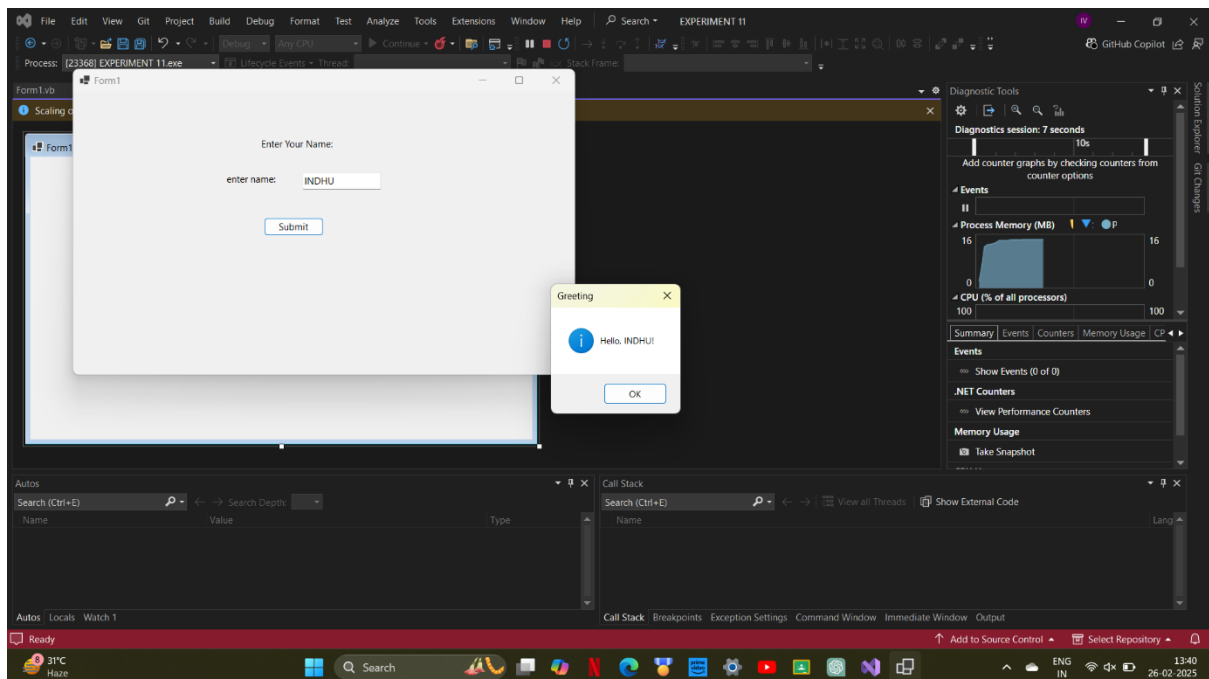

Aim:

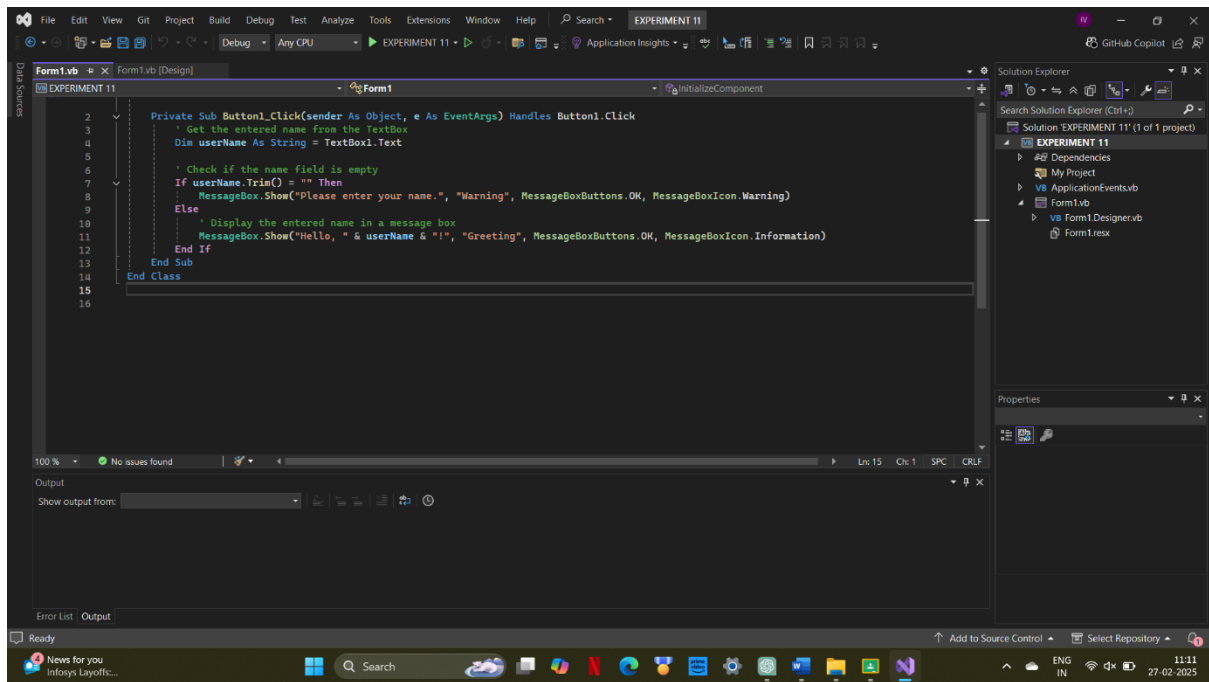

To develop a Visual Basic program that takes user input from a textbox and displays a greeting message in a label when a command button is clicked.

Procedure:

1. Open **Visual Basic** and create a new project.
2. Add a **Label**, **Textbox**, and **Command Button** to the form.
3. Set the Label's **Caption** to "Enter Name:".
4. Set the Command Button's **Caption** to "Submit".
5. Double-click the Command Button and enter the following code:

OUTPUT:

RESULT:

When the user enters their name in the textbox and clicks the button, the label displays "Hello, [Name]".
