Experiment 17

**Aim:**

To create a basic page structure using .NET and understand the fundamental components of a web page.

Procedure:

1. Open **Visual Studio** and create a new **ASP.NET Web Forms Application**.

2. Add a new **Web Form (WebForm1.aspx)** to the project.

3. Modify **WebForm1.aspx** to include basic HTML and ASP.NET controls like labels, textboxes, and buttons.

4. Run the project and verify the structure.

Output:

Result:

A basic ASP.NET web page structure was created successfully.
